Table of contents

[UDC 2](#)

[The foreword 6](#)

[1. Introduction 6](#)

[2. Epidemiological and economic value of a Brown rat 9](#)

[3. An organizational and methodological basis of deratization 19](#)

[Chapter 1. A material and methods of researches 28](#)

[1.1. Methods group marking of Brown rats 28](#)

[1.1.1. Histologic dyes as markers 29](#)

[1.1.2. Copper and zinc sulphides as markers 32](#)

[1.1.3. Group antibiotics of tetracycline as markers 34](#)

[1.2. Studying the diet 42](#)

[1.3. Identifying the age and age structure of the population 43](#)

[1.4. An estimation of numbers of Brown rats and efficiency of deratization 53](#)

[1.4.1. Built up areas 53](#)

[1.4.2. Undeveloped areas 64](#)

[1.5. Testing rodenticides 67](#)

[1.5.1. Requirements to laboratory animals 67](#)

[1.5.2. Introduction of chemical substances in a gastroenteric path 67](#)

[1.5.3. Testing rodenticide baits 68](#)

[1.5.4. The efficiency express analysis of rodenticides on a basis of triphenacine and tetraphenacine 71](#)

[1.5.5. Testing rodenticide coverings 73](#)

[Chapter 2. Ecology of Brown rat 75](#)

[2.1. The characteristic of a food of Brown rat 75](#)

[2.2. Reproduction, death rate, age structure and dynamics of number 83](#)

[2.2.1. Key parametres defining dynamics of number of animals in population 83](#)

[2.2.2. Reproductive function of males 86](#)

[2.2.3. Reproductive function of females](#) 88

[2.2.4. A seasonal course of reproduction](#) 97

[2.2.5. Age structure and death rate](#) 118

[2.2.6. Size of death rate](#) 119

[2.3. Spatial structure of population, its mobility and zone features](#) 127

[2.3.1. A zone *exoanthropy*](#) 130

[2.3.2. A zone of partial *synanthropy*](#) 141

[2.3.3. A zone of full *synanthropy*](#) 155

[2.4. A general characteristic of behaviour of Brown rat](#) 157

[2.5. Roughly - research activity of Brown rat](#) 160

[2.6. Food and social behaviour](#) 165

[Chapter 3. Management of number](#) 173

[3.1. Population structure as a basis of strategy and tactics of deratization](#) 173

[3.1.1. Population structure of kind](#) 173

[3.1.2. A substantiation of expediency and possibility of decrease in number of rodents to certain admissible level](#) 177

[3.1.3. Existential subpopulation units, their annual dynamics and stability to damaging influences](#) 184

[3.1.4. A role estimation intrapopulation Variability as a basis of working out of tactics of management of number of Brown rats](#) 191

[3.1.5. Variability of sensitivity to rodenticide baits](#) 202

[3.1.6. Development modelling equal-static reactions to baits with anticoagulants of indirect action on laboratory lines Brown rats](#) 218

[3.1.7. Variability of sensitivity to rodenticide coverings](#) 226

[3.2. Management of number of Brown rat by increase in compulsory death rate](#) 233

[3.2.1. Technologies of application of means of deratization](#) 233

[3.2.2. Change of an inhabitancy of rodents as a management method their number](#) 258

[3.2.3. An order \(procedure\) of an estimation of a sanitary-engineering condition of object](#) 266

3.2.4. Designing of elements of an inhabitancy of rodents with the purpose of increase of efficiency of use of means of their catching and destruction 268

3.2.5. An order (procedure) of carrying out of deratization on the most responsible objects (nurseries, medical, food) 280

3.3. Management of birth rate 286

Chapter 4. Features of strategy and deratization tactics on objects of various categories 290

4.1. Undeveloped areas and agrocenoses 290

4.2. Cities and settlements of countryside 297

4.2.1. Attempts of destruction of Brown rats within settlement, cities - an example of management of ecological population. 298

*4.2.2. Features of deratization in some types of cities*303

*4.2.3. Management of number of Brown rats at the large industrial enterprise – an example of management elementary population*312

4.2.4. A substantiation of necessity of replacement of the dominating concept of continuous regular deratization on the concept continuous regular inspections (monitoring) and selective deratization 320

4.2.5. An order (procedure) of carrying out of gathering of the information on population rodents of structures in territory of settlement, area 332

Chapter 5. A safety estimation of rodenticides and their ways of application 335

Chapter 6. Attempt of mathematical modelling of the processes occurring at destruction of rodents 342

6.1. Certainly-raznostnaja model of restoration of number of rodents in the territory processed by rodenticides 345

6.2. Model of detection by rodents of baits 348

6.3. Likelihood model of regulation of number of rodents in the territory processed by rodenticides 354

6.3.1. An estimation of probability of clearing of object from rodents 355

6.3.2. An estimation of probability of settling by rodents of the given object 358

6.4. An estimation of possibility of the forecast of number of rodents 361

The conclusion 364

Some concepts and definitions 372

The list of the used literature 379
